 Chennai, Tamil Nadu, India  Naukri: saraswathan.i

Senior Full Stack .NET Developer with 4+ years of experience delivering enterprise-grade web applications using **.NET Core, Angular, and SQL Server**. Proven track record in HIPAA-compliant healthcare, inventory management, CRM, and HRMS domains. Expertise in microservices architecture, REST API design, database query optimization, and Azure cloud services. Passionate about clean code, performance tuning, and agile delivery.

Technical Skills

.NET Core 6/8 ASP.NET Core MVC C# Entity Framework Core Dapper LINQ

RESTful Web APIs JWT Authentication Microservices Angular 14/16 TypeScript RxJS

HTML5/CSS3 Bootstrap / Angular Material SQL Server / T-SQL Stored Procedures & Query Tuning

Azure Blob Storage Azure Functions Azure DevOps / CI/CD Git / GitHub Swagger / Postman

Agile / Scrum

Work Experience

Senior Full Stack Developer 2024 – Present

WillWorks Infinity – Product Based (Inventory & Finance)

- Lead full-stack development of **Stockcount** enterprise inventory platform (Audit, Inventory, Finance modules) using Angular 16 + .NET Core 8 microservices.
- Architected multi-company support with granular RBAC, permission management, and JWT-based authentication.
- Built GST/VAT tax calculation engine, auto-numbered invoices (GRN/DN), and comprehensive accounting reports (ledger, trial balance, P&L).
- Integrated Azure Blob Storage and optimized SQL Server for high-volume production data loads; improved batch processing by 40%.
- Designed REST APIs handling 500k+ daily requests with response caching, pagination, and performance monitoring.
- Mentored junior developers, conducted code reviews, and established coding standards.

Backend Developer (.NET Core) 2023 – 2024

Nohitatu Technologies – Healthcare & CRM (US Clients)

- Delivered .NET Core APIs for **PHICURE** (HIPAA-compliant healthcare platform) and CRM applications; implemented data encryption and secure document management.
- Optimized SQL queries and stored procedures, achieving a 40% reduction in query execution time through indexing and query refactoring.
- Implemented Azure Functions for background data processing pipelines and Azure Blob Storage for HIPAA-compliant document storage.
- Built authentication middleware and role-based access control for multi-tenant architecture.

.NET Developer

2022 – 2023

Human Cloud Soft – Service Based

- Developed RESTful APIs using .NET Core for various client domains; designed database schemas, stored procedures, and efficient data access layers using Entity Framework & Dapper.
- Implemented structured logging, global exception handling, and RBAC security across services.
- Integrated Swagger documentation and Postman test suites, reducing API integration friction by 25%.

Key Projects

Stockout – Inventory Management System .NET 8 · Angular 16 · SQL · Azure

- End-to-end purchase/sales with GST/VAT calculations, multi-company financial workflows, ledger, trial balance, and profit & loss statements.
- Microservices architecture with Azure Blob for document storage; reduced report generation time by 35%.

PHICURE – HIPAA-Compliant Healthcare Platform .NET 5 · Angular 14 · SQL · HIPAA

- Built secure data encryption and automated scheduler services for US client reporting; full-stack healthcare data management & analytics.
- Achieved 100% HIPAA compliance for data storage and transmission using Azure security controls.

CRM Software – Customer Pipeline Automation .NET 7 · Angular 16 · Azure Functions

- End-to-end customer and sales pipeline management with RBAC audit logging and real-time background sync services.
- Reduced data inconsistency issues by 90% through idempotent Azure Functions.

HRMS – Human Resource Management .NET 7 · Angular 16 · Azure Blob

- Employee management, payroll, attendance, recruitment, onboarding & document processing using secure Azure Blob Storage.
- Designed role-based document access, improving compliance and audit readiness.

Education

Bachelor of Commerce (B.Com) – Pachaiyappa's College, Chennai (2019 – 2022)

Achievements

- ★ 40% faster SQL query execution through indexing and stored procedure optimization.
- ★ 32% reduction in API response latency by implementing caching strategies and EF Core tuning.
- ★ Led migration of monolithic inventory module to microservices, increasing deployment velocity by 50%.
- ★ Designed reusable Angular component library, cutting frontend development effort by 25%.
- ★ Successfully delivered 5+ enterprise-scale applications on time with zero critical production defects.
